

TECHNICAL DATA SHEET RETARDER 89 8020

APPLICATION

Retarder 89 8020 is an additive to slow the drying time of water-based flexographic inks and coatings.

SPECIAL CHARACTERISTICS

- Retards drying of the ink to allow for cleaner print
- Addition can help prevent ink from drying in fine line anilox cells over long runs
- Low odour upon addition

PROPERTIES

Retarder is an additive that will efficiently slow the ink drying speed. It can be added in combination with water to reduce the ink viscosity and keep ink printing clean over long runs. Care should be taken to keep addition levels below 2% of total volume, as over addition can lead to offsetting of ink print or blocking. Water resistance can also be affected by excessive levels of addition. Please refer to MSDS for handling.

PACKAGING

Plastic Jugs	4 kg	8.8 lb
Plastic Jugs	10 kg	22 lb
Plastic Kits	18 kg	39.6 lb
