

# New UV Product!

The technical UV team introduces a new product now available in North America!

## CureInk UP 5000 series

This new UV ink from Europe has been developed **for printing on non-absorbent substrates** like plastics, metals, etc. This series is suitable for UV Offset as well as UV Rotary Letterpress applications.

The CureInk UP 5000 is comparable to the previous existing UP 7300 or the Y-series, however shows a number of **improvements** such as:

- **Much better adhesion on various plastic substrates and especially on Polypropylene, Polystyrene and some PVC's.**
- **No longer labelled as dangerous product / marine pollutant**
- **Formulated "ITX"- Free**
- **Very good transfer**
- **Higher cure speed**
- **Colour shades match ISO 12846-2 standard**

Pantone basic colours as well as specials are available on this base formulation.

Experience the benefits of CureInk UP 5000. Place your orders now!
